Bird monitoring data indicate that species listed on Annex I of the Birds Directive, such as the Common Crane, benefit from legal protection. However, it appears that the protection is less effective in case of common farmland birds, which are still declining.

	↓	↑	—	?
all common species (167 sp.)	65	50	45	7
common farmland species (39 sp.)	23	6	7	3
common forest species (34 sp.)	13	13	7	1

The numbers in italics show the numbers of species in each indicator which are moderately or steeply declining (↓), moderately or strongly increasing (↑), stable (—) and uncertain (?).

Population Trends of 169 Common European Breeding Birds, 2015.
